DETAILED ACTION

Allowable Subject Matter

1. Claims 1-4 and 6-8 are allowed.

2. The following is an examiner's statement of reasons for allowance:

Claims are allowable over the prior art because a pseudo noise generator comprising a first and second arbitrary random number generator and a controller, wherein the controller controlling said first arbitrary random number generator to selecting alternately one group or the other group of said two groups of first random number signals by said memory selection signal obtained in accordance with said specified Pulse Duration Distribution and said specified Pulse Spacing Distribution defined at said specified level to obtain selected signals, is not found, taught or suggested in the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- (a) Bloch et al. teach a method and apparatus for transferring signals between multiple clock timing domains.
- (b) Nagai teaches a pseudonoise code pull in circuit.
- (c) Welland et al. teach a sampled amplitude read channel employing a discrete time noise generator for calibration.
- (d) Bolk et al. teach an x-ray analysis apparatus with pulse amplitude shift correction and detector reading circuit means suited for use in such an apparatus.
- (d) Albers et al. teach a noise generator using combined outputs of two pseudo-random sequence generators.
- (e) Yoshida et al. teach a carrier-to-noise detector for digital transmission systems.
- (f) Nagazumi teaches a multi-step spread spectrum communication apparatus.
- (g) Young teaches a pseudo-random noise generator.
- (h) Cernius et al. teach a pseudo atmospheric noise generator having variable amplitude probability distributions and discharge fine structure.
- (i) Singer et al. teach a pseudo-atmospheric noise generator with control of temporal characteristics.
- (j) German, Jr. teaches a noiseliike amplitude and phase modulation coding for spread spectrum transmissions.
